

Dynamics 365 PSA to Project Operations Upgrade Playbook

Ensure optimal transition from D365 PSA to Dynamics 365 for Project Operations (Lite)

FastTrack for Dynamics 365 Apps

# Purpose and Scope

#### THE SITUATION

The goal is migrating all PSA 3.x Customers to Project Operations Lite by September 2024.

#### **PURPOSE**

The purpose of this playbook is to provide a framework for customers to effectively:

- Understand why upgrade is important and necessary
- Understand the prerequisites needed to support upgrade.
- Plan their resources needed to support the upgrade process.
- Gain clarity on the expected changes in the application post upgrade.

#### **Audiences:**

Customer Solution Architects

Partner Solution Architects

### In summary, this guide will help you with:

- ✓ Awareness of challenges for IT.
- ✓ Understanding of tools and techniques that would ensure an optimal upgrade.

#### PROJECT OPERATIONS LITE FOR DYNAMICS 365

With Project Operations Lite, you can...

- Manage schedules with the new Project for the Web Experience
- Book resources with the new schedule board
- Adopt new billing and pricing features
- Support project with subcontracted resources

# Chapter 1 Introduction

# Chapter 2 Features

# Chapter 3 Adoption

- Why upgrade to Project Operations Lite?
- Project Service Automation (PSA) to Project Operations
- Currently Released Features
- Major Functionality Changes
- Supported Upgrade Scenarios
- Phases & Timeline
- Upgrade Prerequisites
- Upgrade Process overview
- Licensing Model

- What is Project Operations Lite?
- Project Features with Project for the Web
- material usage on projects and project tasks
- Subcontract management
- Advances and retainer-based contracts
- Contract not-to-exceed status and validations
- Task based billing

Coming soon...

## **Our Vision**

Upgrading customers from Project Service Automation (PSA) to Project Operations Lite will enable Microsoft to more deeply invest in the best project management experiences for service-based organizations. Our customers will benefit from upcoming enhancements in the billing and pricing capabilities of the application along with refinement for service and material-based scenarios. Investments will be made to focus on supporting larger organizations who require more robust scale in size of projects and transactional throughput.

# Project Service Automation (PSA) to Project Operations

Transition to Project Operations Lite to leverage exciting new features.

This feature enables existing PSA customers to upgrade to the latest Project Operations Lite deployment where they can enjoy new features such as:

New Project Scheduling and Scheduling Modes

Recording material usage on projects and project tasks

Subcontract management

Advances and retainer-based contracts

Contract not-to-exceed status and validations

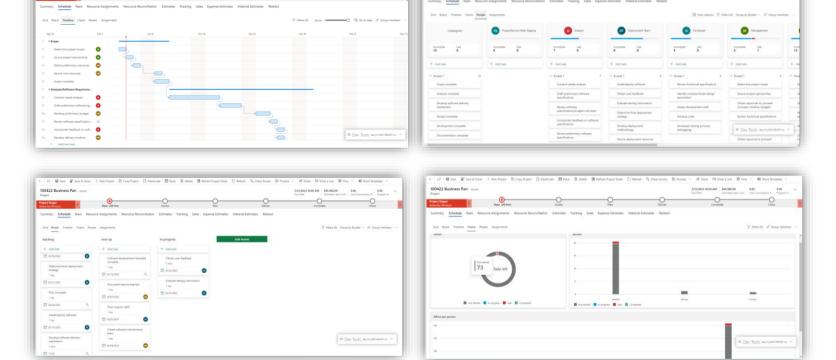

Task-based billing

**Split Billing** 

The process maintains your data and allows partners and customers to focus on updating security roles and customizations.

## **Currently Released Features**

Transition to Project Operations Lite to leverage exciting new features.

"Do more than just moving Project Management"

Short description of the extended value

Short description of the extended value for Project Operations Lite

- New interactive Gantt
- People and Task summary views
- Board view for agile execution
- Desktop controls including cut & paste, undo/redo
- Co-authoring

7

# **Major Functionality Changes**

Project Features: Project for the Web replaces legacy project Features capabilities.

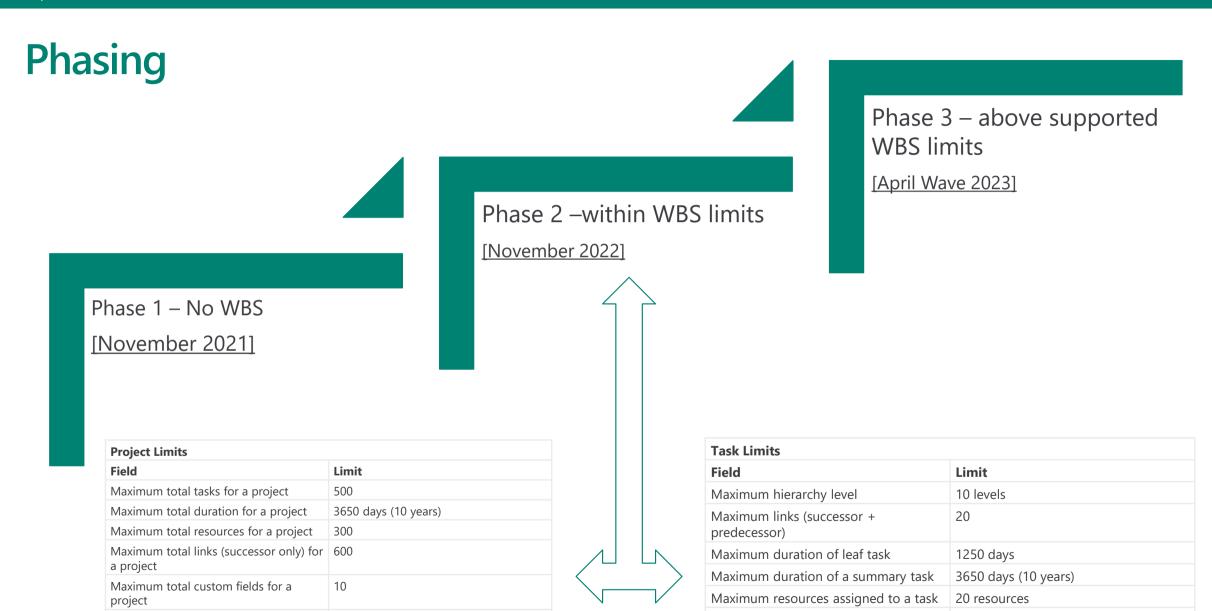

**Project Templates**: OOB Support for project templates have been removed, however, customers can leverage the <a href="Project Copy API">Project Copy API</a> to achieve similar functionality.

**Project Desktop Add-in:** Phase 1 and Phase 2 of upgrade do not support the desktop client add-in.

Writing to WBS Entities: Project schedules managed by Project for the Web, must use the <u>project scheduling</u> <u>APIs</u> create WBS records outside of the UI.

# **Supported Upgrade Scenarios**

Source	Target	Status
Project Service Automation (PSA 3.x)	<u>Lite Deployment</u>	Supported
Project Service Automaton (PSA 3.x)	Resource/non-stocked Deployment	Not currently supported
Project Service Automaton (PSA 3.x)	Stocked/production-based Deployment	Not currently supported
D365 Finance Project Management and Accounting	Lite Deployment	Not currently supported
D365 Finance Project Management and Accounting	Resource/non-stocked Deployment	Not currently supported
Project for the Web (dedicated environment)	Lite Deployment	Not currently supported

Supported date range for a task

1/1/2000 - 12/31/2149

Maximum checklist items per task

20

## Features required to fulfill functional requirements for Upgrade

**Pre-validation Rules** – Surface errors to the administrator when specific pre-validation rules fail as the first step in upgrade providing a means for administrators to better diagnose failed upgrades.

**Disable Project for the Web** – Allow native CUD on WBS related entities, disable on CDS to PSS calls and remove access to the Modern Project Grid for all legacy projects brought forward during upgrade.

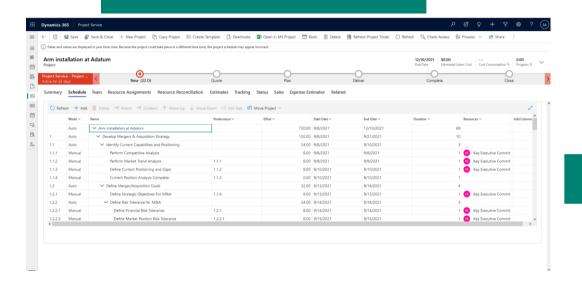

**Read only WBS** – Allow customers to view legacy projects, regardless of WBS limit, in the native CDS app.

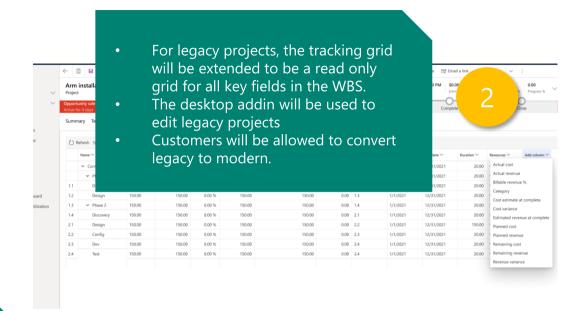

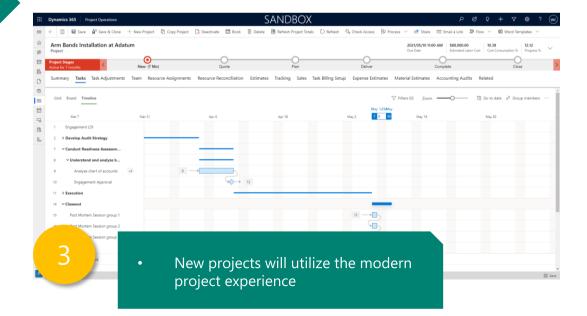

**On demand conversion** – provide the ability for the PM to convert a legacy project to a modern project from the Project Main form for projects that conform to the current <u>WBS limits of Project for the Web.</u>

## Upgrade Process overview

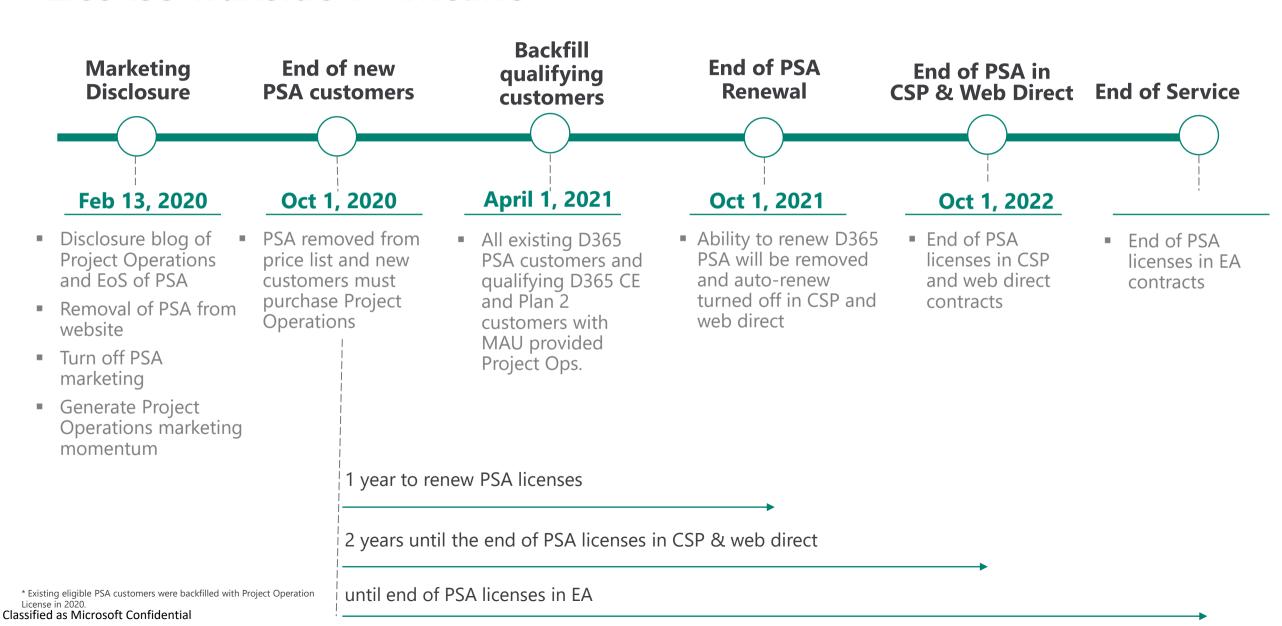

- 1
- New Pre-validation checks
- New error logging for admins
- Upgrade meta data to handle new data model and new 4.x features

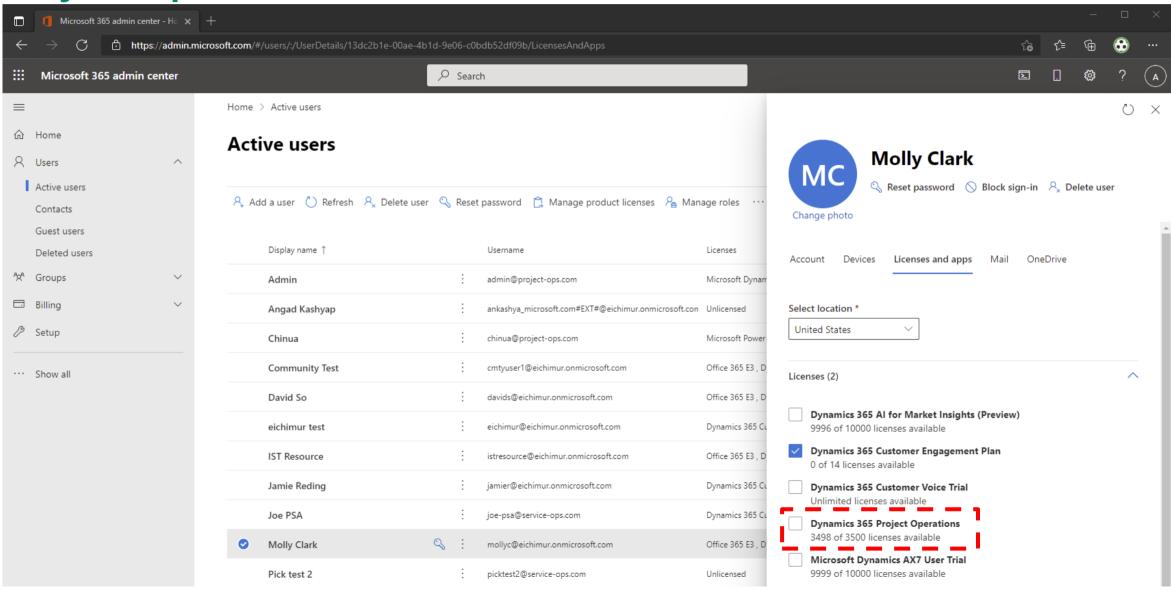

## **License Transition Timeline**

# **Licensing Planning**

- Licensed PSA customers have been backfilled with Project Operations
- Project Operations is a different product to PSA, being licensed for Project
  Operations does not give one access to PSA. When a customer's PSA license expires,
  they will no longer have access to PSA
- Customer needs more time on PSA? <a href="http://aka.ms/ineedpsa">http://aka.ms/ineedpsa</a>
- Project Operations does not include entitlement to Project Desktop Client

# **Project Operations License (full)**

# **Project Operations Licenses and Apps**

## Name of app entitlement

Common Data Service for Dynamics 365 Project Operations

Dynamics 365 for Finance and Operations, Enterprise edition - Regulatory Service

**Dynamics 365 Project Operations** 

(or Dynamics 365 Project Operations Attach)

**Dynamics 365 Project Operations CDS** 

(or Dynamics 365 Project Operations CDS Attach)

**Exchange Foundation?** 

Power Apps for Dynamics 365

Power Automate for Dynamics 365

Power Pages Internal User

**Project for Project Operations** 

(or Project for Project Operations Attach)

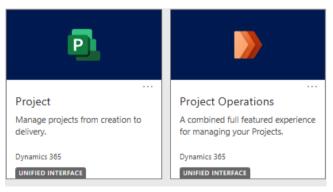

SharePoint (Plan 1)

### **PSA**

## **Project Operations**

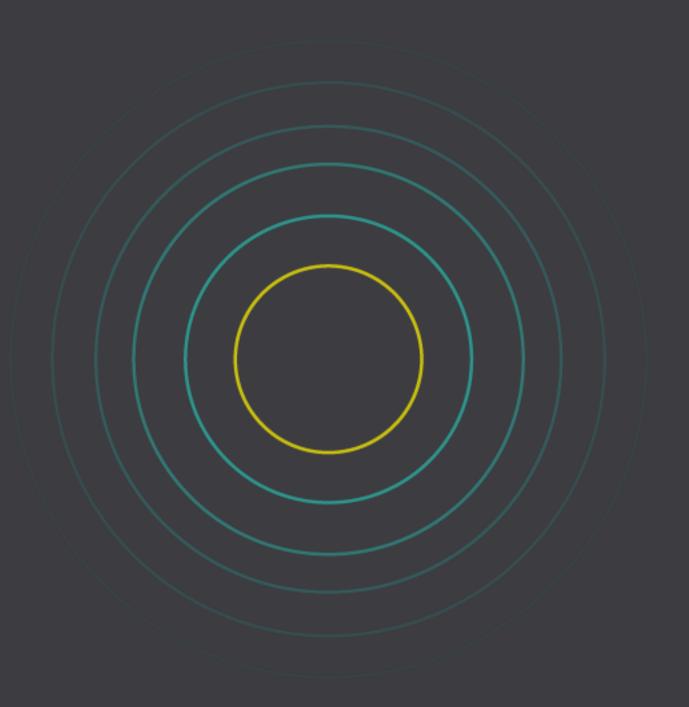

Make sure at least the highlighted apps are enabled (full license)

Team Members license does not include Project, but rights are across Dynamics 365 products. Access is via designated Team Member apps. See <u>Licensing Guide</u>.

# Chapter 2: Features

## Chapter 2: Features

# What is Project Operations Lite?

Project Operations empowers project-centric organizations with the right capabilities to drive success– from prospect to payment to profit.

Project Operations builds upon the strengths in Project Service Automation while providing rich new experiences in project Features along with exciting tools to provide more flexibility in quoting and contracting to support both service and non-stocked materials scenarios. New features include:

#### Project Features with Project for the Web

• Schedule with new robust tools for both agile and waterfall project delivery.

#### Recording material usage on projects and project tasks

• Estimate and track consumption of non-stocked materials.

### **Subcontract management**

• Contract, invoice and staff project with external resources.

#### Advances and retainer-based contracts

• Create retainer-based billing schedules

#### Contract not-to-exceed status and validations

• Provides robust contract control at the customer, contract or contract line level.

#### Task based & Split billing

- Quote and contract lines can be mapped to specific tasks in the work breakdown structure.
- Add contract line to one or many paying customers

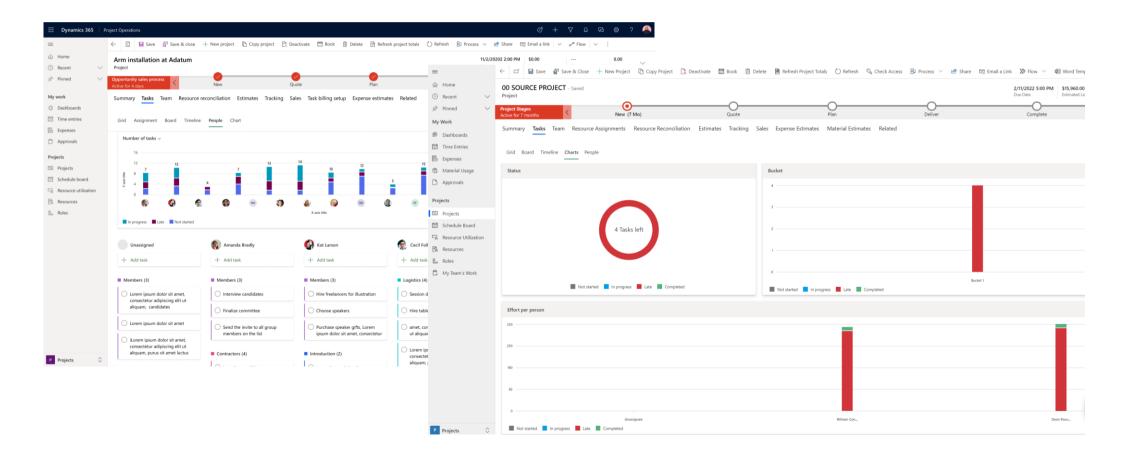

#### **Project Budget Management (Preview)**

•A project budget represents a point-in-time snapshot of the estimated spend across the project phases and its associated tasks.

## Project Features with Project for the Web

 People view and Charts view quantify the number of tasks assigned to a resource in a task and aggregate task status by task or resource.

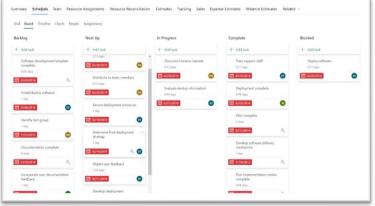

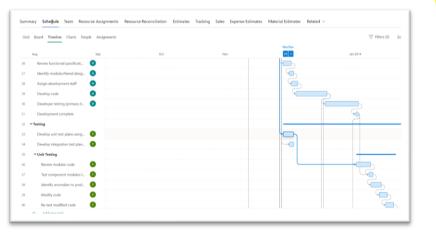

Classified as Microsoft Confidential

**Project Features with Project for the Web** 

1

advanced grid view with drag and drop, cut and paste, multi-select etc.

2

The board view can be used for agile project delivery

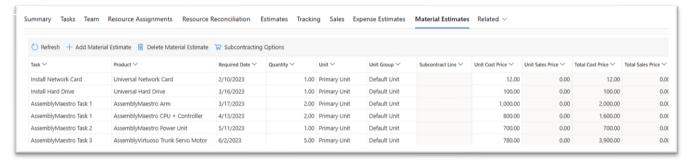

The timeline view allows customers to edit and view the tasks in a gantt

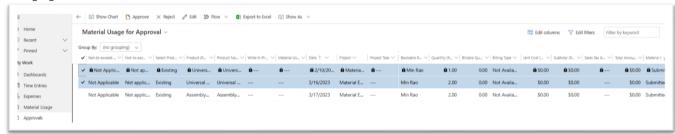

## Chapter 2: Features

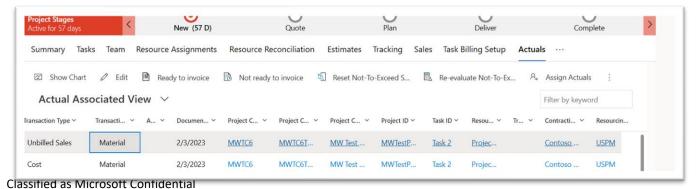

# Recording material usage on projects and project tasks

## **Estimate**

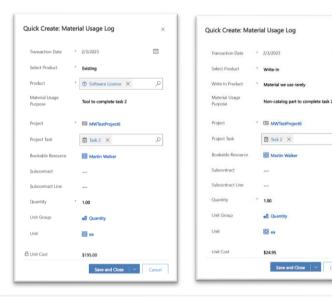

## **Approve**

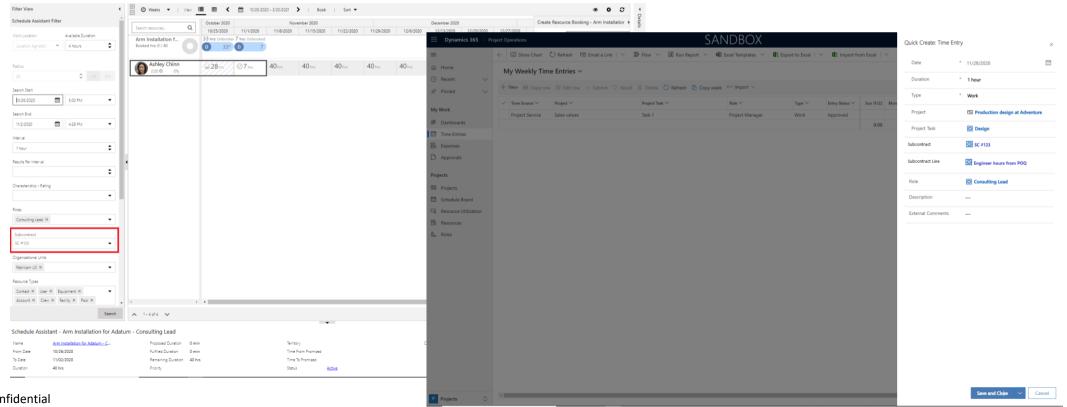

## Record

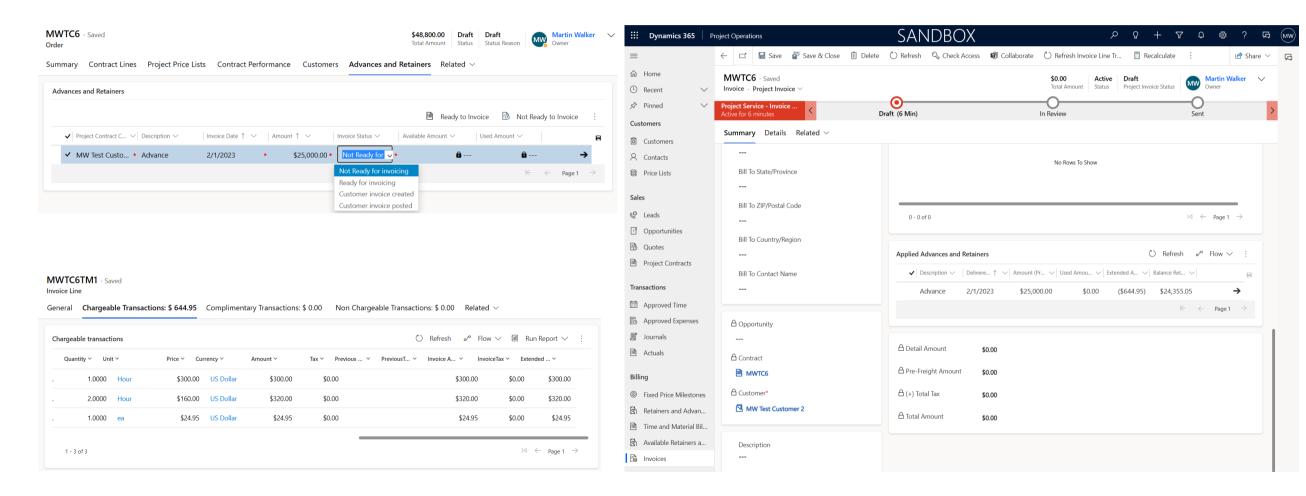

## Subcontract management

- When a book experience is initiated from Project, the Schedule Board can filtered to show Contract Workers from specific subcontracts
- Contract Workers recording time entries will be prompted with a subcontract and subcontract line when entering time so that the time is costed based on what was agreed on with the vendor contractually.

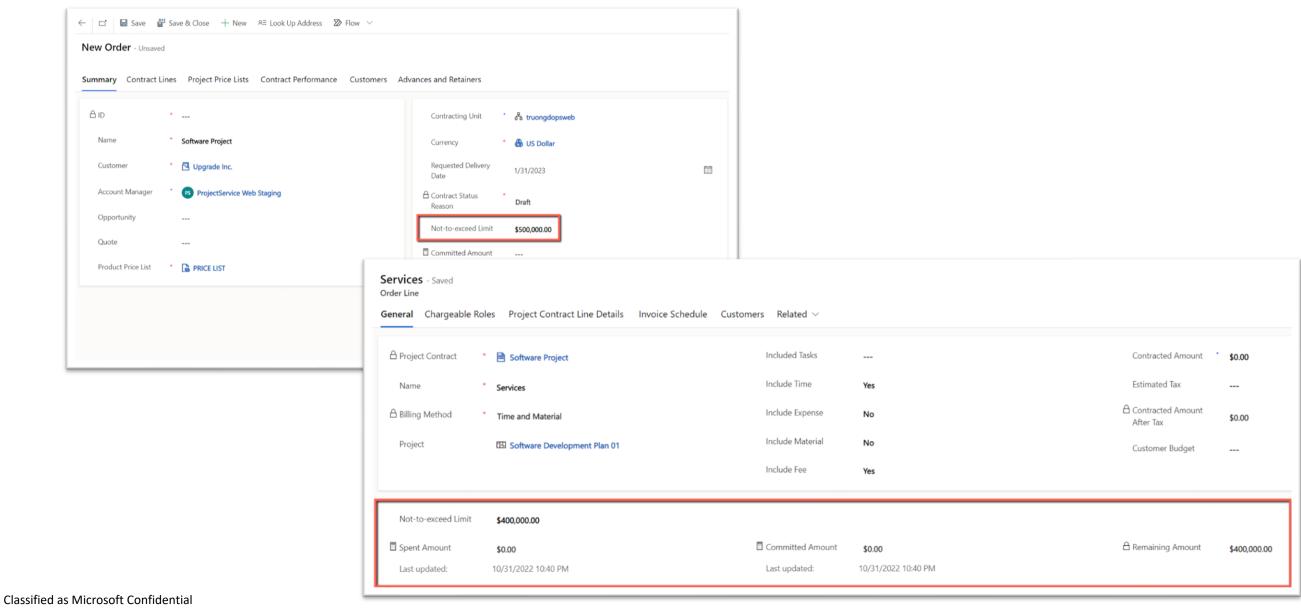

## Advances and retainer-based contracts

Classified as Microsoft Confidential

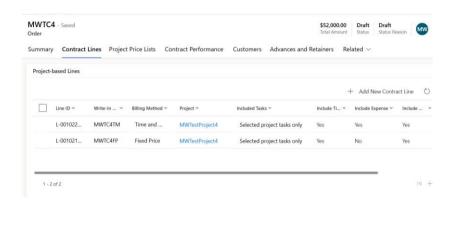

## Chapter 2: Features

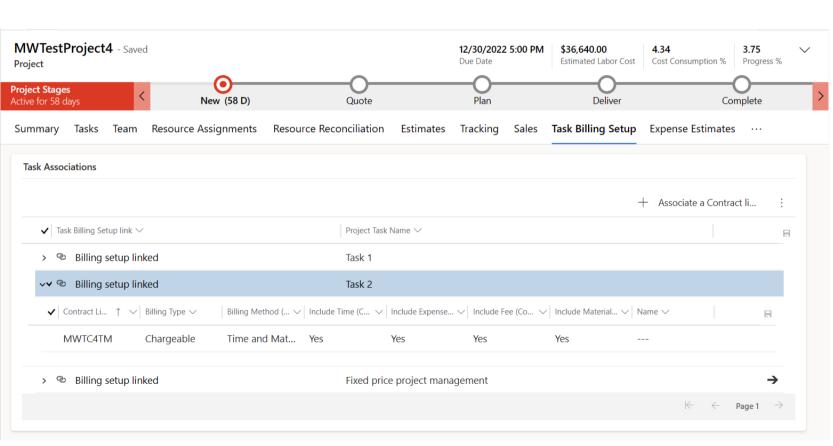

## Contract not-to-exceed status and validations

# Task-based billing

Provides ability to associate tasks in a project with different contract lines

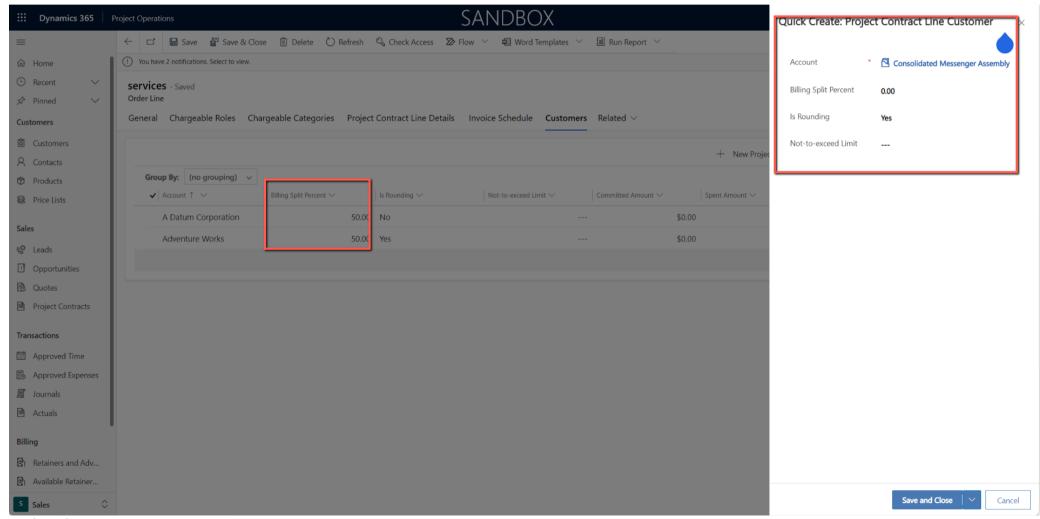

25

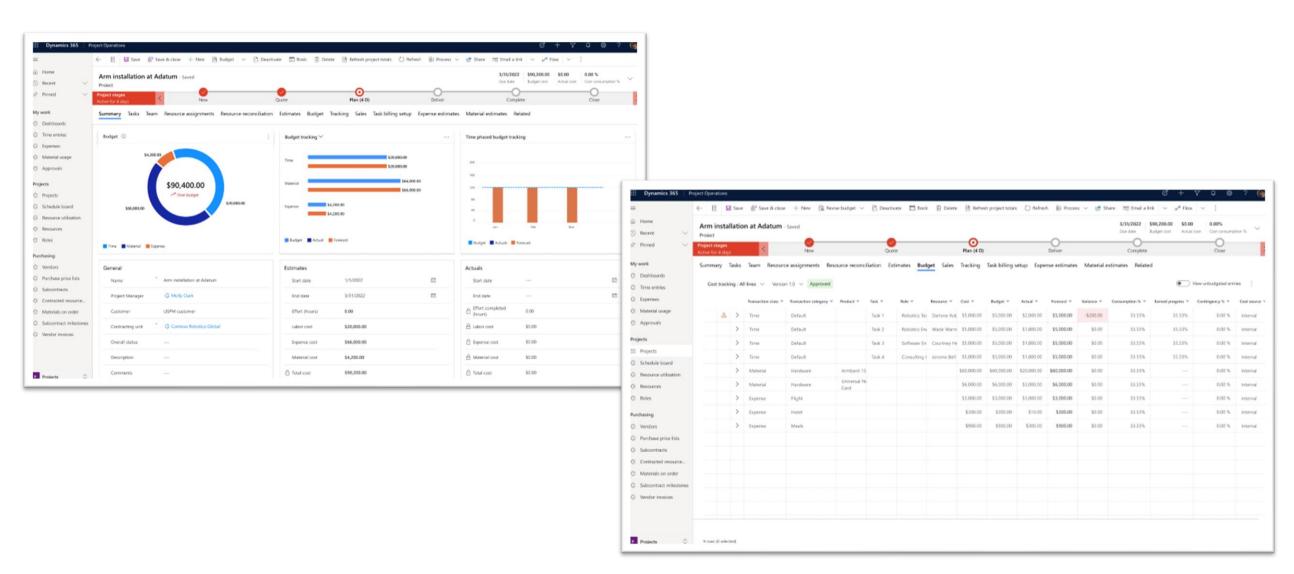

# Split billing

Provides ability to define % of a contract line to be billed to each of multiple customers.
