# Environment Management – Limit Sharing

➤ **Limit sharing of canvas apps in a managed environment**

Managed Environment sharing controls allow admins to manage how broadly makers can share canvas apps to users.
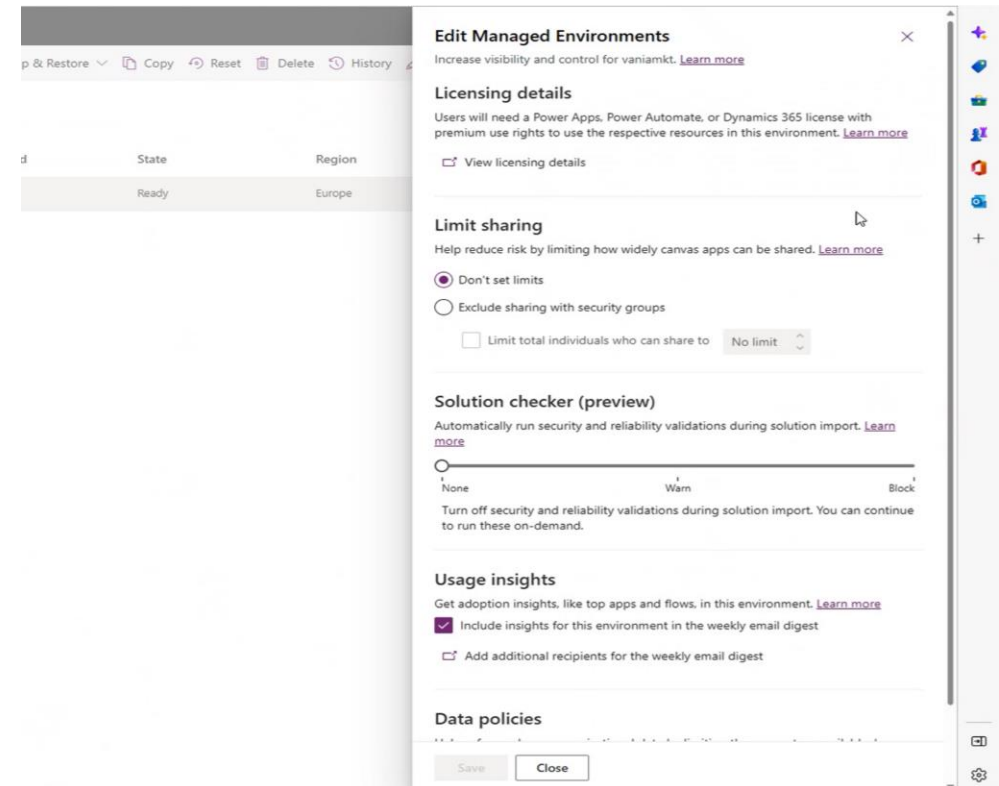

•GA: **Oct 12, 2022**

➤ **Limit sharing of flows within a solution in Managed Environments**

The existing sharing limits for canvas apps located in managed environments will now equally apply to cloud flows that are stored into solutions.

•Public Preview: **Feb 2023**

**Public documentation**

# Environment Management – Solution Checker

**Solution checker enforcement during solution import into managed environment**

With solution checker, customers can identify harmful configurations and customizations in their solutions early, as part of the application lifecycle management (ALM) process. This feature helps to make their apps more reliable, secure, and performant.

Public Preview: **Jan 2023**

# Environment Management – Usage Insights

## Usage Insights

Stay informed about what's happening in your managed environments with Power Platform's weekly admin digest. Analytics about your top apps, your most impactful makers, and inactive resources you can safely clean up are distilled and delivered to your mailbox once a week.

# Users

**Permanently delete users with disabled status**

➢ When users have been disabled or deleted from Azure Active Directory or the Microsoft 365 admin center, they're set to **disabled** status in Microsoft Dataverse. Disabled users residing in the system not only take up storage space but prevent historical records from being purged.

➢ This feature provides the capability to delete and remove users who have a disabled status while maintaining data integrity. It also allows compliance officers to enforce GDPR delete user requirements.

Public Preview: **Dec 12, 2022**
